

Drivve | DM Desktop Client Release Notes Version 8

Knowledge base article #7089

Release Notes for Windows Desktop Client Version 8

Setup 8.0.471 (10.09.2020)

Bug Fixes

- Outlook 2010 crashes after initializing the Add-In.

Setup 8.0.469 (19.08.2020)

Bug Fixes

- If multiple documents are assigned to an existing workflow, not all documents may get assigned to the selected workflow.

Setup 8.0.459 (06.01.2020)

Bug Fixes

- Outlook: If you edit an email reply or email forward and then switch to another email in the main Outlook window, the button "Send and Archive" is disabled.

Setup 8.0.456 (14.11.2019)

Bug Fixes

- Closing an Office document while the saving action to Drivve | DM is still ongoing, might cause an error message after the document has been successfully saved.
- Outlook Add-In: The action "Send and Archive" cannot be supported for inline replies or inline forwards. It is recommended to enable the option "Open replies and forwards in a new window" if the action "Send and Archive" is going to be used.
- Outlook Add-In: Improved startup time to avoid deactivation of the Add-In.

Setup 8.0.450 (23.10.2019)

Bug Fixes

Outlook Add-in: After saving an Email in Drivve | DM, the question to keep or delete an email is not shown anymore. In addition, the category "Archived in Drivve | DM" is not set anymore.

Setup 8.0.447 (27.09.2019)

Bug Fixes

Synchronization: Under certain conditions, the file upload to Drivve | DM is creating new files for existing files. Search conditions with custom date values, sometimes disappear after re-opening the configuration application.

Setup 8.0.444 (26.08.2019)

Bug Fixes

- Office Add-In: If the current office application window loses focus while saving a document in Drivve | DM, the save action may fail.
- Synchronization: Saving a PDF file may create a corrupt PDF file, if the file is not part of the DM preview cache.

Setup 8.0.426 (26.07.2019)

Bug Fixes

- Synchronization: If the regional date format of the computer is not set to a German format, the file upload will always create a new version of the synchronized files.

Setup 8.0.410 (02.07.2019)

Enhancements

- Extended Permission checks in Desktop Client.
 - Add Document (this is the basic permission to upload a file in upload dialog or create new files in sync).
 - Add Notes (to add document or workflow notes)
 - View spaces (to select spaces in upload)
 - Create Workflow (to start a new workflow in upload or sync)
 - View Workflows (to do anything with workflows)
 - Download (basic permission for sync)
 - Search documents (basic permission for sync)
 - Edit document (in sync back)
 - Modify Index (update fields in sync)

Bug Fixes

- Assigning a document to an existing Workflow fails since version 8.0.401.

Setup 8.0.403 (28.06.2019)

Bug Fixes

- After the latest MS Office update to version 1906 (Build 11727.20210), saving an Email from Outlook fails.

Setup 8.0.401 (24.06.2019)

Bug Fixes

- For MS-Office documents in "Protected View", the Drivve Add-In buttons are not disabled.
- When editing multiple documents in parallel out of Drivve | DM, only the first document can be saved as new version.
- Synchronization: If a file path is longer than the allowed Windows path length, the synchronization fails and cannot be restarted.

Setup 8.0.398 (24.05.2019)

Enhancements

- Minimized server round-trips during the initialization of the "Add new documents" dialog.

Bug Fixes

- Under certain conditions, the index values are not displayed in the "Add documents" dialog.

Setup 8.0.387 (08.05.2019)

Bug Fixes

- If a new MS Office document without changes is closed, it is still saved locally.

- If an existing MS Office document with changes is closed it is saved automatically.

Setup 8.0.384 (18.04.2019)

Bug Fixes

- The error handling in case of invalid or empty login data has been improved.
- If an index set is defined on a cabinet and a filing shortcut is selected that contains this cabinet, the index set on the cabinet is not displayed.
- Opening a MS Office document for editing out of the web browser does not work in IE 11.
- If a new Office document is archived in DM without first saving the document and the local file name already exists, a confusing error message is shown.

Setup 8.0.373 (02.04.2019)

Bug Fixes

- Office Add-In: Saving a document with "Save as new Version" without changing the document content does not clean up the Drivve document properties.
- Opening multiple documents from Drive | DM in office in parallel, "save as new version" may update the wrong document.
- The entity in the settings dialog is not always displayed.
- Sometimes the index values are not displayed in the "Add documents" dialog.
- During a silent installation, the settings version number is not raised correctly.

Enhancements

- Office Add-In: If a document, which has been edited in Office out of Drivve | DM, is renamed or copied, it cannot be saved as new version afterwards.
- Office Add-In: If a document, which has been edited in Office out of Drivve | DM, is locally closed, later re-opened and the checkout for this document has been cancelled, a warning is shown to the user before saving as a new version.
- The documentation has been updated to include the flag "Use Https" in the global settings.

Setup 8.0.360 (18.03.2019)

Bug Fixes

- Synchronization: After adding a new local file, and updating it shortly after, the changes are not saved in Drivve | DM. The update worked, if the time between the last change was longer than the time span between the local time and UTC time.

Setup 8.0.354 (22.02.2019)

Bug Fixes

- An error during saving a new document version from MSOffice is not displayed to the user.
- Additional permission check to validate if the user has edit permission for the current document.
- Optimize index field initialization, because sometimes the index values are not displayed.

Setup 8.0.348 (29.01.2019)

Bug Fixes

- Mandatory fields of type ODBC Enumeration are not always marked.
- In rare cases the communication between the Office Add-Ins and the agent does not work.
- Optimized loading and error handling of the index values.

Setup 8.0.338 (25.10.2018)

Bug Fixes

- Not all mandatory fields are marked with a red border.

Setup 8.0.336 (17.10.2018)

Enhancements

- Improve exception handling in indexing dialog.

Setup 8.0.335 (17.10.2018)

Enhancements

- Support for MS **Office 2019**
- In the workflow selection, the columns are shown which are defined in the Drivve | DM Field Manager. Only the fields with assigned users or groups are not displayed in the desktop client.
- In the space search, the maximum visible width of the space name has been increased, to ensure that longer space names can be read.

Bug Fixes

- If the filing path is a mandatory field, the filing path is not marked as mandatory for the first document which is saved after the Desktop Client has been started.

Setup 8.0.326 (27.09.2018)

Bug Fixes

- ODBC enumeration index field: Database field names with a blank in the name cause an invalid display value in the result list.
- Index sets, which are explicitly defined on cabinet, drawer, folder, or binder are not applied.

Setup 8.0.317 (09.08.2018)

Enhancements

- To avoid the deactivation of the Office Add-Ins, the Agent will add the them to the list of never-disabled Add-Ins. This setting can be deactivated in the Desktop Client settings.

Bug Fixes

- The Desktop Client overwrites the DM user settings for custom Dashboard logos.
- Improved exception handling.

Setup 8.0.309 (25.07.2018)

Bug Fixes

- Opening MSOffice documents from the browser fails, if the user is authenticated via Active Directory.
- The localization of the synchronization settings dialog is not complete.
- The default GlobalSettings.xml for silent installation contains an invalid tag for AdLoginWithUserprincipalname.

Setup 8.0.305 (19.06.2018)

Bug Fixes

- The Active Directory login of the Desktop Client is not working.

Setup 8.0.302 (20.06.2018)

Bug Fixes

- Using the Desktop Client may cause displaying the dialog with the new features in the Drive | DM web browser again.

Setup 8.0.300 (18.06.2018)

New Features

- Optional access to local server via HTTPS, if the Drive | DM server provides a valid and trusted certificate.
- Switch user interface language of Desktop Client with menu entry. The MS office Add-Ins are not affected by this settings, because the user interface culture of Office Add-Ins is set at startup time by the current windows culture.
- Drive | DM guest licenses are checked. Users with a guest license cannot use the Drive | DM Desktop Client..

Enhancements

- Outlook-Categories are fully supported in Outlook 2013 and 2016 for MS Exchange Email accounts. The Desktop Client is setting the categories for emails only, which are assigned to a MS Exchange account.
- Improved support for Twain clients.
- The last TWAIN scan setting are saved and used as default for the next scan.

Bug Fixes

- For read-only Office documents, it might not be possible to create a new document version
- The selection of the filing path is not always refreshed correctly.
- Synchronization: A search for a filing shortcut might deliver too many results in certain conditions.
- Login: The server/entity selection is empty sometimes, when the settings dialog is opened.
- The desktop client is not starting anymore, if the configuration file contains invalid XML data.
- Switching servers in the synchronization settings caused an error in some conditions.
