

## Driveve Jobs Release Notes Version 9

Knowledge base article #7282

# Release Notes Driveve Jobs Version 9

### Setup 9.0.218 (28.07.2021)

#### Enhancements

- Email Archive Job: Option to clip attachments and email in Driveve | DM.
- Improved memory management when downloading large files

### Setup 9.0.212 (10.06.2021)

#### Bug Fixes

- The SAP ByD Jobs do not start anymore due to an initialization error.

### Setup 9.0.210 (08.06.2021)

#### Bug Fixes

- Field updates may not be written to Driveve | DM, if a field value contains an invalid variable definition.
- Field updates for group inboxes of job configurations > 1 are not saved correctly. Please check your jobs when you have configured group inboxes.

### Setup 9.0.204 (23.04.2020)

#### Enhancements

- DATEV job configuration: Improved field input validation to match the latest DATEV specification.
- DATEV job export: Improved export field validation to match the latest DATEV specification.

#### Bug Fixes

- DATEV job: The optional field Branchenlösungs-Id was not exported to DATEV.

### Setup 9.0.201 (26.02.2021)

#### Bug Fix

- Under certain condition, the creation of the support.zip fails.
- The ODBC test may cause a crash in the configuration application, if certain unexpected database data is returned.

### Setup 9.0.197 (02.02.2021)

### **Bug Fix**

- Searches for space type with the values "All" or "None" have not been saved in the jobs configuration.

## **Setup 9.0.194 (05.01.2021)**

### **New Features**

- Record Action Job: As a new action, records can be deleted to the Drive | DM trash.

### **Bug Fix**

- The Jobs setup copied files from the temp folder to the Jobs Install folder. This increased the size of support.zip files..

## **Setup 9.0.190 (21.12.2020)**

### **Enhancements**

- DATEV Export Job: Updated DATEV accounting systems SKR3 and SKR4 for 2021.

## **Setup 9.0.188 (10.12.2020)**

### **Bug Fix**

- Enumeration fields, which have the setting "Allow no value" not checked, cause an error in the Jobs configuration, when they are selected in a search condition.

## **Setup 9.0.185 (07.12.2020)**

### **New Features**

- Email Jobs: The authentication to Exchange Online supports OAuth2-Confidential now. Basic Authentication will not be supported anymore by Microsoft at some point in 2021.

### **Enhancements**

- The search for enumeration fields allows the search for "no value" and "any value" now.
- Some field types, e.g. enumerations can be used multiple times within a search condition. They will be combined by an AND condition

### **Bug Fixes**

- Sync Job: If multiple configurations are created with saved searches and self defined searches, some search definitions may become deactivated.

## **Setup 9.0.177 (06.11.2020)**

### **Enhancements**

- Facture-X Job: Support for specification 2.1.1 with new profile XRechnung.
- Space Import Job: If a space name contains Carriage Return characters, these are removed before saving the space in Drive | DM.

## Setup 9.0.172 (20.10.2020)

### Bug Fix

- The button "Save" and "Cancel" are deactivated while the Jobs data is still loaded from the server. Saving a job while data is still loaded might cause data loss in the jobs configuration.

## Setup 9.0.170 (23.09.2020)

### Bug Fix

- Space Import Job: If the imported space name contains tab characters, and new spaces are matched by space name, then always a new space is created.

## Setup 9.0.167 (03.09.2020)

### Bug Fixes

- DATEV Export Job: The saved configuration settings are not displayed anymore after re-opening the job configuration.
- The help links point directly to the new LRS support page now.

## Setup 9.0.157 (04.08.2020)

### Enhancements

- Adapt to optimizations of the Drive | DM server.
- Update user interface library. No functional changes.

## Setup 9.0.147 (30.06.2020)

### Bug Fixes

- With certain job schedule definitions the update from V8 to V9 fails.

## Setup 9.0.145 (24.06.2020)

### New Features

- File Export Job: The meta data export supports the export of document notes.

### Bug Fixes

- Under certain conditions, closing a job dialog may cause an error.

## Setup 9.0.137 (01.06.2020)

### New Features

- New Factor-X job: Extract data from Factor-X compliant invoices. Supports specification version 2.1.
- Workflow Trigger job: Workflow task assignee's can be determined at run-time based on values in other index fields.
- Index field updates for text values may be configured to contain static text and values from other index fields, which are determined at run-time.
- Index field updates: In all jobs the full filing path can be selected instead of the filing shortcut only.

- Allow searches with ranges for date, date-time, number and currency.
- Index Export job: Index field updates can be defined for the case, that an SQL update query does not find any record in the SQL database.
- Workflow Trigger job: After starting a workflow, related document index fields or space index fields can be updated immediately.
- File Export job: PDF files with annotations can optionally export the annotations now.
- File Import job: Files may be imported with a single CSV meta data file, if this file contains a reference to the import files.
- AD Synchronization job: Support for LDAPS: Secure communication with your Active Directory server.

## Enhancements

- All Jobs with SQL queries: The result values of a query can be extracted without executing the query, as long as the syntax is correct.
- Enhanced permission checks for the configuration and execution of jobs.
- Additional configuration options for the log output.
- File import job: If no XML or CSV configuration is provided, static field updates can still be configured.
- File Import job: The job is proceeding, if the folder for the CSV import log is not existing. The folder is created now, if it does not exist.
- CSV import tests: The first 50 records from the CSV file are displayed now.
- Sync job: Improved robustness, if file has already been downloaded but the sync log cannot be updated.
- Active Directory job: The test dialog is non blocking while the AD server is accessed.
- File export job: The export folder can be a manually edited UNC path.
- Index export job: Option to support notes from documents, spaces and workflows.
- Index export job: Line breaks are replaced by blanks in export values, because line breaks are not valid in CSV files.

## Bug Fixes

- Record Action Job: The search condition for a search of the space name is not displayed again, when the job configuration is re-opened.
- Field updates for the space type, space status or document type fails, if the name of such a field ends with a closing bracket ")".
- Index export job: Additional space values are not exported correctly into CSV files.
- Email archive job: The configuration view is broken, until at least one configuration exists.
